Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4 and 7 drawn to a method for manufacturing a circuit device, classified in class 29, subclass 846.
 - II. Claims 5-6, 8 and 9-16 drawn to a circuit device comprising a plurality of stackable electronic components, classified in class 361, subclass 790.

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, Invention Group I could be made by another different method. For example, Invention Group I could be made, for example, without a wiring layer or a step of shaping a surface of a mold material irregularly.

2. This application contains claims directed to the following patentably distinct species of the claimed invention:

a) If Applicant selects Invention Group I, Applicant is required to elect a single species.

In Group I:

Embodiment 1: A method for manufacturing a circuit device with a bonding step of pressing a terminal section against a wiring substrate.

Embodiment 1: A method for manufacturing a circuit device with a step of shaping a surface of a mold material irregularly; a step of forming a cathode on the surface of the mold material, the cathode being used for electroplating.

b) If Applicant selects Invention Group II, Applicant is required to elect a single species.

In Group II:

Embodiment 1: An electronic component.

Embodiment 1: A circuit device comprising a plurality of electronic components.

3. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh Y. Tran whose telephone number is (571) 272-2110. The examiner can normally be reached on Monday through Thursday and on alternate Fridays.
